

Claims

1. A resealable packaging bag made of a flexible material having an opening (5) at the top, wherein non-detachably fixed to one side (1) of the bag is a backing (6), detachably fixed to the backing (6) is a section (10) made of a flexible material provided with a self-adhesive layer, and a portion (8) of the backing (6) and a portion of the section (10) project beyond the opening edge (14) of the bag.

2. The resealable bag according to claim 1, wherein the backing (6) has a separating line (7) which is designed as a weakened line or divides the backing into two parts (8, 9) and which extends at least approximately parallel to the opening edge.

3. The resealable bag according to claim 1 or 2, characterized by a recess (11) in the backing (6) and/or in the section (10), which recess extends from the edge of the backing (6) and the vertex of which lies in the region of the separating line (7).

4. The resealable bag according to one of the preceding claims, wherein the flexible material of the packaging bag has at least one layer of paper which is located on the outside of the packaging bag.

5. The resealable bag according to one of the claims 1 to 3, wherein the flexible material of the packaging bag is paper.

6. The resealable bag according to one of the preceding claims, wherein it has a side gusset.

7. The resealable bag according to one of the preceding claims, wherein the opening edge (14) is designed as sealing edge (12).
